

# When Altec Lansing® Wanted To Bring Full Spectrum Sound To A Desktop...

# ST's Systems-on-Silicon Struck All The Right Chords.

There is literally no room for compromise in Altec Lansing's revolutionary new slim profile computer speaker systems. So in developing them, they turned to the leader in highly-integrated chip sets: STMicroelectronics.

These speaker systems — incorporating micro driver and other advanced audio technologies — are nothing short of extraordinary. Because never before has such power and clarity come from such a small, streamlined package.

In cooperation with ST, a new Power IC and ASIC were developed, allowing all of the benefits of Altec Lansing's unique Equalization Circuit to be incorporated. Whatever your application — whatever your challenges — ST is a very sound choice for you, too.
